

M LUN MAR MI	É JUE VIE SÁB
Com An	egra, onde a ultima termo apareceo de:
	$\frac{\partial}{\partial y}\left(\frac{y}{y}\right)=x\cdot\frac{\partial^2}{\partial y}=x\cdot\left(-\frac{1}{y^2}\right)=-\frac{y^2}{y^2}$
Agora vamos	calcular, substituindo as derivadas que calculares.
m at the	$\frac{\partial f}{\partial y} = n \left(2 n \theta + \left(n^2 + y^2 \right) \theta' + y \left(2 y \theta + \left(n^2 + y^2 \right) \theta' + y \right) \right)$
	3f = 2n² p (n²+n²) p m + 2n² p - (n²+n²) p m =
	que o segundo e o quarto são iguais, entre eles se cancelo nosso calculo:
	$\frac{\partial}{\partial x} = \frac{\partial}{\partial x} + \frac{\partial}{\partial y} + \frac{\partial}{\partial y} = \frac{\partial}{\partial y} = \frac{\partial}{\partial y} + \frac{\partial}{\partial y} + \frac{\partial}{\partial y} = \frac{\partial}{\partial y} + \frac{\partial}{\partial y} + \frac{\partial}{\partial y} = \frac{\partial}{\partial y} + \frac{\partial}{\partial y} + \frac{\partial}{\partial y} = \frac{\partial}{\partial y} + \frac{\partial}{\partial y} + \frac{\partial}{\partial y} = \frac{\partial}{\partial y} + \frac{\partial}{\partial y} + \frac{\partial}{\partial y} = \frac{\partial}{\partial y} + \frac{\partial}{\partial y} + \frac{\partial}{\partial y} = \frac{\partial}{\partial y} + \frac{\partial}{\partial y} + \frac{\partial}{\partial y} + \frac{\partial}{\partial y} = \frac{\partial}{\partial y} + \frac{\partial}{\partial y} + \frac{\partial}{\partial y} = \frac{\partial}{\partial y} + \frac{\partial}{\partial y} + \frac{\partial}{\partial y} = \frac{\partial}{\partial y} + \frac{\partial}{\partial y} + \frac{\partial}{\partial y} = \frac{\partial}{\partial y} + \frac{\partial}{\partial y} + \frac{\partial}{\partial y} = \frac{\partial}{\partial y} + \frac{\partial}{\partial y} + \frac{\partial}{\partial y} = \frac{\partial}{\partial y} + \frac{\partial}{\partial y} + \frac{\partial}{\partial y} = \frac{\partial}{\partial y} + \frac{\partial}{\partial y} + \frac{\partial}{\partial y} + \frac{\partial}{\partial y} = \frac{\partial}{\partial y} + \frac{\partial}{\partial y} + \frac{\partial}{\partial y} = \frac{\partial}{\partial y} + \frac{\partial}{\partial y} + \frac{\partial}{\partial y} = \frac{\partial}{\partial y} + \frac{\partial}{\partial y} + \frac{\partial}{\partial y} = \frac{\partial}{\partial y} + \frac{\partial}{\partial y} + \frac{\partial}{\partial y} = \frac{\partial}{\partial y} + \frac{\partial}{\partial y} + \frac{\partial}{\partial y} = \frac{\partial}{\partial y} + \frac{\partial}{\partial y} + \frac{\partial}{\partial y} = \frac{\partial}{\partial y} + \frac{\partial}{\partial y} + \frac{\partial}{\partial y} = \frac{\partial}{\partial y} + \frac{\partial}{\partial y} = \frac{\partial}{\partial y} + \frac{\partial}{\partial y} = \frac{\partial}{\partial y} + \frac{\partial}{\partial y} + \frac{\partial}{\partial y} = \frac{\partial}{\partial y} + \frac{\partial}{\partial y} + \frac{\partial}{\partial y} = \frac{\partial}{\partial y} + \frac{\partial}{\partial y} + \frac{\partial}{\partial y} = \frac{\partial}{\partial y} + \frac{\partial}{\partial y} + \frac{\partial}{\partial y} = \frac{\partial}{\partial y} + \frac{\partial}{\partial y} + \frac{\partial}{\partial y} = \frac{\partial}{\partial y} + \frac{\partial}{\partial y} + \frac{\partial}{\partial y} = \frac{\partial}{\partial y} + \frac{\partial}{\partial y} + \frac{\partial}{\partial y} + \frac{\partial}{\partial y} = \frac{\partial}{\partial y} + \frac{\partial}{\partial y} + \frac{\partial}{\partial y} = \frac{\partial}{\partial y} + \frac{\partial}{\partial y} + \frac{\partial}{\partial y} = \frac{\partial}{\partial y} + \frac{\partial}{\partial y} + \frac{\partial}{\partial y} + \frac{\partial}{\partial y} = \frac{\partial}{\partial y} + \frac{\partial}{\partial y} + \frac{\partial}{\partial y} + \frac{\partial}{\partial y} = \frac{\partial}{\partial y} + \frac{\partial}{\partial y} + \frac{\partial}{\partial y} + \frac{\partial}{\partial y} + \frac{\partial}{\partial y} = \frac{\partial}{\partial y} + \frac{\partial}$
* Observe o expresão,	termo assim, esta multiplicando por 2 e reconhendo entro, concluiros que finalmente mostramos que
	$\frac{\partial f}{\partial x} + \frac{\partial f}{\partial y} = 2f$
